

SAFETY MADE SIMPLE.

AEC 2020 Hackathon Presentation

Motivation

“He who saves the life of one,
saves the entire world” :)

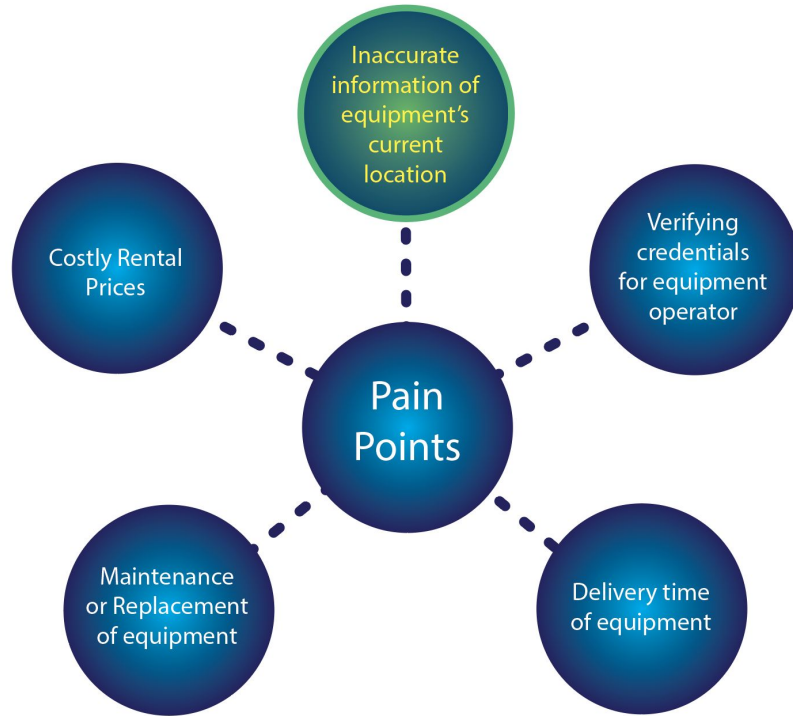

Problem Statement

The current state of construction equipment management lacks transparency and the ability of tracking information.

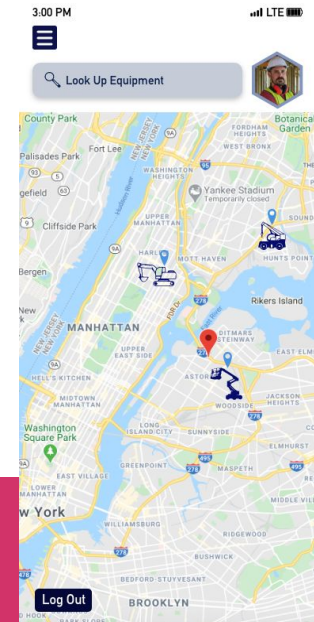

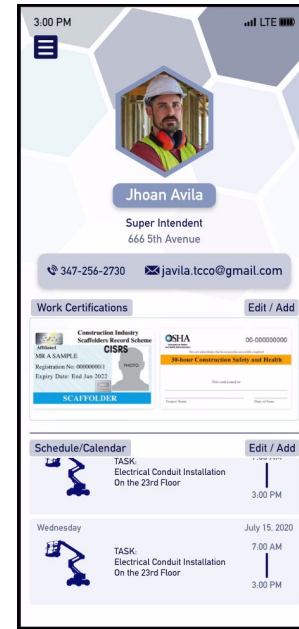

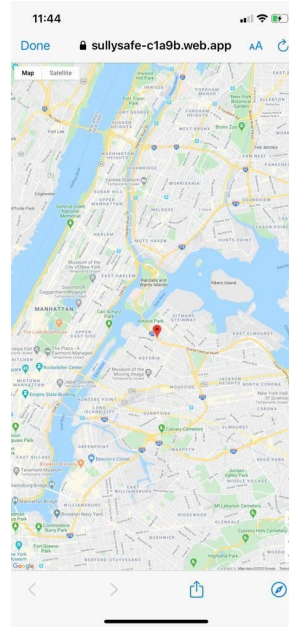

Hackathon Break Down

Hackathon Development

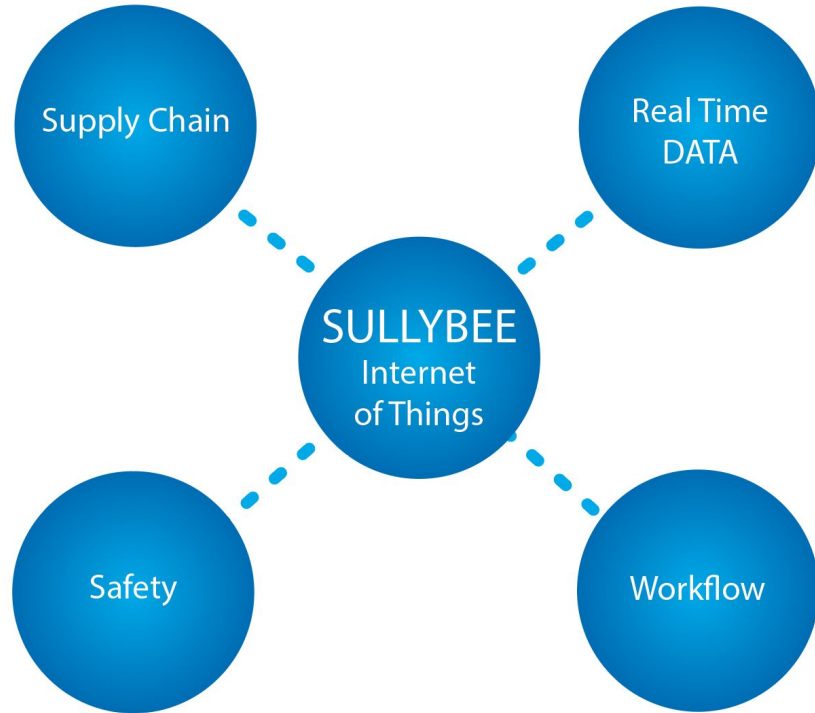

- Raspberry Pi
- GPS
- Huawei Modem
- IoT (Cloud and Connectivity)

Note: All Developed during the Hackathon

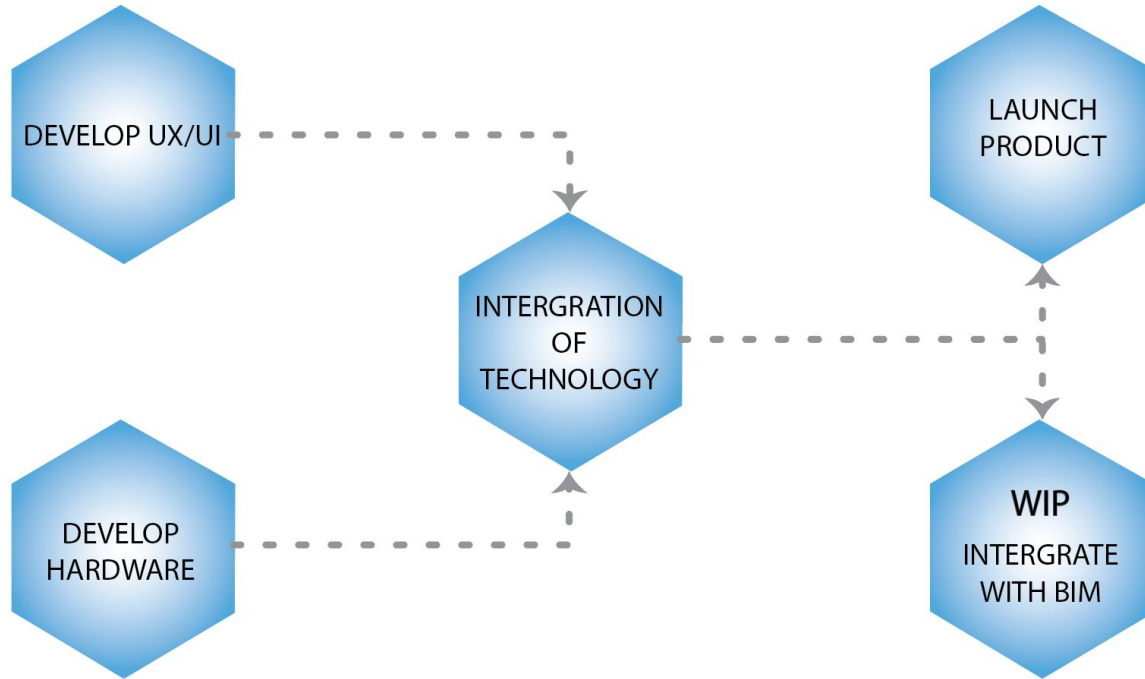

Hackathon Goal

Development Roadmap

Video of Hack

- **Devpost**
 - Loom Video
- **Link to Web App**
 - SullyBee

SullyBee Team

Kudzai
Tunduwani

BIM Engineer

Joseph
Cardozo

State University of New York

Project
Manager

Jhoan Avila

State University of New York

Superintendent

Margarita
Gonzalez

Product
Design

Angel Beltre

State University of New York

Computer
Science

Appendix

Market Target/Business Model

+Add date for equipment related incidents

*Earth moving equipment
rate / day = \$571:
Forklift rate / day = \$196

Business plan

Percentage of the transactions v.s. Monthly recurring payment

Installation = price of hardware + profit

Service = price of software + profit

Competition

- Equipment Share
- BusyBusy

UX/UI
